This study will examine the safety of giving the experimental drug, resiniferatoxin (RTX), to treat severe pain in patients with advanced cancer. RTX is a chemical extracted from a cactus-like plant. It is similar to capsaicin, the active ingredient in hot pepper. RTX has relieved pain and reduced ...

What is in-situ microscopy?. In-situ transmission electron microscopy combines the image formation capabilities of the transmission electron microscope (TEM) with the application of one or more external stimuli to observe real-time sample dynamics. Currently, a wide variety of systems and holders are available to apply different stimuli to evaluate dynamics during electrical biasing ...

Choosing an antibacterial agent can be challenging, given the wide array of drugs available. Learning the important properties and uses of these drugs is made easier by the fact that they are grouped in classes based on their biochemical structure. Members of a drug class share characteristics such as clearance, mechanism of action, absorption, and side effects; knowing these shared properties ...

Vitiligo is one of the oldest and commonest skin disorders affecting approximately 1-2% of the human population. 1 The disease shows no regard to the ethnic, racial or socioeconomic background of the affected sufferers. The cosmetic impact of this disease is tremendous and its psychological impact devastating particularly in coloured races. 2,3,4 The aetiopathogenesis of this disease is now ...

Main Text. The great British physiologist Hugh Davson, one of the founders of the modern concept of the blood-brain barrier (BBB), discussed in his state-of-the art review some 30 years ago the model and functions of the BBB (Davson, 1976). In Davson's era, and later in the eighties and early nineties, very little, if anything, was known about the role of the BBB in the pathogenesis of brain ...

More than 25% of the U.S. population aged  $\geq 65$  years has diabetes (1), and the aging of the overall population is a significant driver of the diabetes epidemic. Although the burden of diabetes is often described in terms of its impact on working-age adults, diabetes in older adults is linked to higher mortality, reduced functional status, and increased risk of institutionalization (2).
